Warehouse TERRADA

Seisyou Corporation

Press Release

**Business and Capital Partnership between
Warehouse TERRADA and Seisyou Corporation
aiming to start the digitizing and storing service for
valuable documents**

-Providing one-stop digital archive system to suit clients' needs-

Warehouse TERRADA (Shinagawa, Tokyo / President and CEO: Yoshihisa Nakano) and
Seisyou Corporation (Shinjuku, Tokyo / CEO: Taishi Yamamoto) have concluded a
business and capital partnership on October 30th, 2015, aiming to start a new business.

Warehouse TERRADA, established in 1950, has been developing "safekeeping /
preserving" business under the extremely suitable conditions for each item, instead of
just storing items like ordinal warehouse business. They have been making an active

capital investment, using their know-how of how to utilize spaces. Their storage technologies for items requiring high expertise such as artworks, audio-visual media, and wines have been received a great reputation by each industry.

Seisyou Corporation, since its foundation in 2012, has been providing the service called “Sonomama Scan (scan as it is),” digitizing the valuable books and ancient documents without disassembling (non-destructive scanning), where they meet the needs by both general and public corporations. The total page of documents being digitized in FY 2014 reached one million, including the back numbers of magazines, the house journal of companies, documents of academic conferences, and documents of important cultural properties. They own and develop their digital archive system as well; keeping and managing digitized documents on a cloud.

As a conclusion of this partnership, both companies are willing to develop an original digital archive system with an advanced function on extensibility and information retrieval, aiming to provide the one-stop service from digitizing to storing the valuable documents. The new service is planned to be launched in December 2015.

What is “Sonomama Scan”? (<http://sei-syou.com/howtouse>)

“Sonomama Scan” is a high quality digitizing service for valuable documents without disassembling books by the staff holding a special license. This service has been used with house journals of both general and public corporations, companies, and associations, research papers, back number of magazines, valuable government documents, and important cultural properties. Over one million pages in total have been digitized in FY 2014. The OCR process (optional service), including the proofreading organized by an original verifying system, enables to extract the text data close to 100% accurate from ancient documents. The digitizing service is highly used especially for the books already out of print or the documents kept only as a printed matter in the need of diverting into the other documents.
